

MYCELLS

You'd like to use a high-quality system for treating your cells.

MyCELLS PRP® has passed stringent quality tests performed by Harlan Biotech Ltd and by BSL Bioservice, Laboratories GmbH.

All the tests were performed according to the protocols established within the European Reference Standards or the official guidelines, recognized at European level (Official Pharmacopoeia), and complying with the stringent requirements for obtaining the FDA approval.

For any further information please contact your doctor.

Treatment of ulcers

Your cells for tissue regeneration

Treatment of ulcers

MyCells PRP® - Platelet-rich plasma - represents the natural and safe solution to accelerate healing by reducing or eliminating aggressive therapies or therapies that have side effects.

The Biological Cells Regeneration Therapies represent today the most innovative and safest treatment for complex wounds, ulcers and skin lesions, using the patient's own cells.

We regenerate tissue around complex wounds with the most biocompatible substance:

THE PATIENT'S OWN CELLS

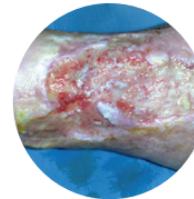

There are many causes for wounds, ulcers and skin lesions: diabetes, vascular diseases, tissue aging and trauma. Such wounds, which often have delayed healing and long recovery periods, affect the patients' quality of life, creating pain and discomfort. The external agents affect the injuries exposing the patient to additional risks of bacterial and viral contamination.

MyCells PRP® represents the most innovative and safest treatment program for cutaneous lesions and tissue damage of the "soft tissue".

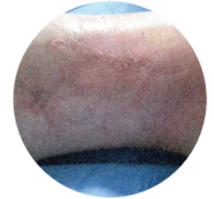

The use of the patient's own cells – the autologous method - processed in a dedicated manner and applied to the injured area, stimulates the natural release of growth factors and the subsequent promotion of stem cells, initiating the regeneration of the degenerated tissue, and the remodeling of the injured part.

The diseases most commonly treated with MyCells PRP® therapy are:

DIABETIC FOOT
VASCULAR ULCERS
RADIONECROTIC ULCERS
PHLEBITIS
BEDSORES
TRAUMATIC WOUNDS
LESIONS AFTER INTERVENTION

Vascular ulcer before the treatment with MyCells PRP

Vascular ulcer 1 month after just one treatment with MyCells PRP

The MyCells PRP® treatment, used in combination with other strategies such as the latest generation of advanced medicines based on collagen, or topical drug treatments, amplifies their effects and duration in time.
